

# TigerTurf: Tennis

**Synthetic surfaces so well made, they serve up advantages on and off the court.**

## Overview

Designed in consultation with top players, TigerTurf's advanced range of synthetic tennis surfaces offer clubs a 'straight sets' win.

Whether you choose to invest in a TigerTurf surface that matches the different bounce, ball speed and performance qualities of clay, grass or indoor carpet, you'll enjoy the advantage of having long-life, all-weather courts that are playable day in and day out, season after season, year after year. Which, in addition to pleasing existing club members, will help you to attract new ones ~ and keep the 'financial kitty' full. It even serves up the opportunity to raise more revenue from increased court hire.

TigerTurf supplies a range of synthetic surfaces designed for differing performance requirements; players benefit from a sure-footed surface that not only delivers excellent traction, but the shock-absorbency and 'give' needed to be gentle on their joints and prevent injury.

TigerTurf also supply and install the full range of acrylic surfacing options. From economical acrylic hard court coatings to high performance cushioned acrylic surfaces, TigerTurf can meet your needs.

High performance, low maintenance and a real answer to water restrictions, TigerTurf offers every club a first class (and surprisingly affordable) resurfacing solution that is made-to-order and backed by expert installation, ongoing service support and a full 5 Year Product Warranty. All design options are available with permanent line marking and in a selection of colours. We can even assist you with incorporating lighting, fencing and accessories into your project.

## Range: Star

Reproducing the appearance and performance of high quality clay, but with year round play, porosity and lower maintenance, TigerTurf Clayturf is the ideal surface for players who enjoy a slower surface, which takes slice and spin. Added comfort from the special coloured granulate ensures players can slide into shots and assists in reducing after match fatigue.

Short pile tennis courts offer the perfect game for players of all abilities. Thanks to a unique fibre system, the dense TigerTurf Grand Prix surface grips the ball to optimise speed and spin, whilst offering excellent responsiveness and foot grip. TigerTurf Grand Prix and Commercial Grand Prix is the short pile tennis surface of choice in the sport and leisure industry.

The TigerCushion Pro acrylic surface offers the optimum in durability, player comfort and sports performance. All TigerTurf cushioned surfaces provide a rubber underlay which reduces fatigue whilst retaining confident player footing. The acrylic chemistry allows heat and vapour to pass through the systems, reducing surface temperatures and associated 'heat factor'.

## Range: Premier

TigerTurf's wide range of Premier rated synthetic grass surfaces includes Elite, KDK Tennis and Tournament 1000. These grasses offer a variety of pile height, infill and stitch density to meet all budgets and usage requirements.

TigerCushion is an acrylic based rubber cushioned system providing excellent durability and shock absorption.

## Range: Standard

TigerTurf's Classic and Tournament synthetic grass surfaces offer an entry level price with reliable performance. TigerTurf standard products utilise the same premium yarn with reduced density and face weight to meet all budgets.

TigerPave is an acrylic based durable hardcourt system providing uniform texture and excellent abrasion resistance.

Product	Description	Pace	Weight g/sqm	Pile Height mm	Warranty Period years	Category
Clayturf 270	Dense clay red polypropylene fibrillated fibre surface, designed to be over filled with red granulate replicating claycourt performance to ITF 1 Standards.	Slow to Medium	750	11	5	Star
Grand Prix	10.5mm high dense polypropylene fibre high durability part filled with sand.	Medium	1370	10.5	5	Star
Commercial Grand Prix	12mm high density polypropylene fibre. Part filled with sand.	Medium	1540	12	7	Star
