

International standard synthetic grass surfaces that allow clubs to play at the highest level.

Overview

Performed at its best, hockey is characterised by brilliant ball control and precision passing. But for players to really showcase their skills, it's also a sport which benefits from a sure-footed playing pitch completely free of bumps, hollows and imperfections; and one that remains unaffected by rain or dry conditions. This is why international level competition now takes place on synthetic grass fields worldwide; and why the advanced range of TigerTurf surfaces are today among the most favoured of all.

Stringently tested and fully endorsed by the Federation of International Hockey (FIH), TigerTurf is not only made from the finest quality synthetic yarns, its fibres are specially designed to be non-directional ~ ensuring exact across-the-ground passing accuracy and optimum control over ball speed and bounce. In terms of toughness, it's also able to take all the stick teams can throw at it ~ season after season. This has been proven time and again in over 150 TigerTurf installations throughout Australia, New Zealand, Asia and the UK ~ using sand-filled, water-based systems or the latest wet dressed systems that do not require water yet provide a performance equivalent to advanced wet field surfaces.

High performance, low maintenance and a real answer to water restrictions. TigerTurf offers every club a first class (and surprisingly affordable) resurfacing solution that is made-to-order and backed by expert installation, ongoing service support and a full 7 Year Product Warranty. All designs are available with permanent line marking and in a selection of colours. We can even assist you with incorporating lighting and fencing into your project.

Range: Star

TigerTurf Wet Dressed provides the perfect hockey playing surface. High density, medium height, non directional, sand dressed surface – requiring no water.

TigerTurf TT37 is a high density, short height, polypropylene hockey carpet for wet field applications.

Both star products have full FIH approval.

Range: Premier

TigerTurf TT32 and TigerTurf Tournament 25 are today's popular choice for top level club and school hockey. Club and competition hockey is currently played extensively on sand-dressed synthetic turf.

TigerTurf's Challenger is a soft natural looking hockey system at 40mm pile height. Challenger features hard wearing exclusive fibres infilled with specially graded rubber and sand.

Range: Standard

TigerTurf Classic 25/21 and 33/170 offer performance and value for club & school hockey. Pile heights of 25mm or 33mm these sand filled polypropylene surfaces are durable proven performers.

Product	Description	Use	Performance Level	Pile Weight g/sqm	Pile Height mm	Warranty Period years	Category
